

## ABSTRACT

This invention relates to a fine particle of polymer for a plastisol free from halogen atoms and having a specific surface area of 0.6 to 20.0 m<sup>2</sup>/g as  
5 determined by nitrogen-gas adsorption and a non-halogenated plastisol composition therefrom. This invention can provide a non-halogenated plastisol composition which does not generate toxic substances during incineration, is suitable as a coating material  
10 or sealant, and has a low viscosity, resulting in good workability and processability.
